Share the Shore with OUR WILDLIFE

Our beaches are home to shorebirds like sandpipers and plovers, and to seabirds such as gulls and terns. Many of these birds are present in Florida fall through spring, but migrate north to nest. Others are here all year.

The Red Knot’s Journey

Red Knots may travel 20,000 miles each year between their Arctic nesting areas and winter homes. Many winter in Florida; others pass through in migration. They depend on our beaches and flats for food they need to survive and the energy reserves to sustain them in their travels.

Food for Our Birds

Invertebrates living in wrack and wave-washed sands provide food for Red Knots and other shorebirds.

Nesting Shorebirds and Sea Turtles

Some species of shorebirds and seabirds nest on our beaches March to August. Watch out for nests and chicks, which may be difficult to see. Respect posted nesting areas and move away if adult birds seem disturbed.

You Can Help

- Never intentionally flush shorebirds. Walk around groups of feeding or resting birds.
- Don’t let your children chase birds. When forced to fly, birds use up energy reserves.
- Obey pet ordinances. Shorebirds are scared by dogs, even when dogs are leashed.
- Share the word. Human disturbance is the number one threat to our shorebirds.
- Don’t feed gulls and other wildlife.
- Dispose of trash properly.
